Magnetic Base Dial Indicator - Reads in .001" Increments - for GE Engines and Other Miscellaneous Uses

The magnetic base dial indicator is used to check the crankshaft thrust clearance and various backlash readings. The high precision gage comes with .0005 dial increments, and the magnetic base is controlled with a button built onto the base. The gage also comes with an extension and a swivel adapter for easy adjustments.

Hand Held Contact / Non-Contact Tachometer

This hand held tachometer kit includes 5 speed tips, male and female cones and an extension.

Speed: 0-200 RPM
Range: 0-2,000RPM
0-20,000RPM
Accuracy: +1/2 of 1% full scale

T54860

Radiator Cap Tester

This tester is equipped with a 30 PSI glycerin filled gage calibrated to a 1-1/2% full range specification. Shop air is connected to the tester and manifold test pressure is established with a precision regulator mounted on the face of the tester. Three test receptacles are provided to test three tang caps, 2 tang caps and the newer smaller diameter EMD Cap. The test receptacles are manufactured with heat treated alloy steel and are plated to minimize wear and rusting.
